

OneStep

Single-Step Roof Coating

**Get the project done fast
with a single-pass roof coating**

Low Odor

Low VOC

Restore Multiple Substrates

High Solids

High Chemical Resistance

HIGHEST PERFORMING SYSTEMS. LOWEST APPLIED COST.

A high performance, single-step roof coating designed to provide excellent adhesion to multiple substrates and coatings.

OneStep is a moisture-cured, liquid, single-step application, high performance elastomeric coating. It is a high solids coating designed to provide excellent adhesion to multiple substrates and coatings.

OneStep Features

- Single-step Application
- Low Odor & Low VOC
- Highest Performing Quality
- Preserves and Protects Multiple Substrates
- Tougher Chemical Resistance
- Superior Reflectivity
- 97% Solids
- Strong Resistance to Ponding Water
- Compatible with Multiple Chemistries: Urethane, Silicone, ETC.

Packaging 5 Gallon Pails

Cool Roof Restoration

Single-Ply Roof

Clean the existing membrane. Prime as needed. Repair seams, flashings, cracks and tears to restore the membrane's integrity. Coat with one of ERSystems' highly reflective elastomeric roof coatings to extend the life of your roof. A longer roof life means a higher ROI on the roof and less debris in landfills.

Asphalt Roof

Repair blisters, cracks and leaks with like materials. Apply ERSystems' coating and fabric system as a "sacrificial barrier." This will protect the existing asphalt from the environment and the aging process and extend the life of your roof.

Spray Polyurethane Foam Roof

Polyurethane Foam provides the desired R-VALUE. Apply reflective finish coat and start saving money on heating and cooling bills IMMEDIATELY.

Metal

OneStep can be applied in low slope metal applications. Be sure to contact your ER representative to assure the application is appropriate for the metal system being considered.

**Adhesion tests recommended prior to application.*
